EDUCATION

May 2022 - Apr 2026

Bachelors in Computer Engineering

Kantipur Engineering College, Dhapakhel, Lalitpur, Nepal

Completed a comprehensive engineering curriculum with a strong emphasis on Software Engineering, Data Structures, and Database Management Systems. During my tenure at KEC, I developed a rigorous analytical approach to problem-solving and collaborated on technical projects that bridged the gap between theoretical system design and practical web implementation. This academic foundation provides the structural logic I now apply to building scalable full-stack applications using the MERN ecosystem.

TECHNICAL SKILLS

Frontend Development: HTML5, CSS3, Tailwind CSS, React.js, Next.js, TypeScript, Redux Toolkit and Zustand (State Management), ShadCN UI and MUI (component Library), Formik or React Hook Form and Yup or Zod (Handling complex forms and validation), Axios or Fetch (Integration).

Backend Development: Node.js, Express.js, RESTful API Design, GraphQL, JWT Authentication, Middleware implementation, CORS, bcrypt (hashing and compare), Multer.

Database Management: MongoDB (NoSQL), Mongoose and Prisma (ODM), basic SQL/PostgreSQL, Redis (Caching).

Tools & DevOps: Git/GitHub (Version Control), Postman (API Testing), Docker, Vercel/Netlify (Deployment). Figma (Design Tool).

AI Integration: Gemini API/OpenAI API integration for web features, Prompt Engineering for developers.

Engineering Core: Data Structures & Algorithms (DSA), Object-Oriented Programming (OOP), Database Management Systems (DBMS), Operating Systems.

SOFT SKILLS

- **Problem Solving:** Strong analytical mindset developed through engineering coursework.
- **Adaptability:** Fast learner transitioning from a non-coding background to professional web development.
- **Communication & Collaboration:** Experienced in working within version-controlled environments (Git) and participating in peer code reviews.

PROJECTS

■ Bazarr (Ecommerce-Site)

- **Stacks & Libraries:** Next.js, React.js, Tailwind, Node.js, Express.js, Cloudinary, MongoDB, Leaflet (setting Current Location), Redux-Toolskit, Shadcn-UI, Typescript, Esewa api (payment testing), Gemini Api (product recommendation) and more.

Bazar is a full-stack e-commerce platform built for the Nepali market, powered by a Node.js + Express REST API backed by MongoDB and a Next.js 16 + React 19 frontend. It ships with a complete shopping experience — secure JWT authentication, full product CRUD with Cloudinary image hosting, a Redux-powered shopping cart and wishlist, paginated order management with a *pending* → *processing* → *shipped* → *delivered* lifecycle, and seamless eSewa payment processing with HMAC-SHA256 signature verification. What sets it apart is its AI layer: Google Gemini (gemini-1.5-flash) analyses each user's browsing history, wishlist, cart, and past purchases to surface personalised product recommendations with natural-language explanations, while a rule-based help chatbot provides instant order, payment, and profile guidance. Admins get a dedicated analytics dashboard with MongoDB aggregation pipelines driving recharts visualisations for revenue, order counts, and product performance, all wrapped in a responsive shadcn/ui + Tailwind CSS interface.

■ AI-Interview-Prep

- **Stacks & Libraries:** React.js, Next.js, Redux-Toolskit, Node.js, Express.js, MongoDB, Shadcn UI, pdfkit(PDF generator), pdf-parse(PDF text parsing/extraction), Puppeteer(HTML to PDF rendering), Gemini Api.

AI Prep is a full-stack AI-powered job preparation platform built with a Next.js 16 (React 19, TypeScript) frontend and an Express.js + MongoDB backend, designed to help job seekers bridge the gap between their current skills and their dream roles. Users can securely register and authenticate via JWT-based sessions, then upload PDF resumes for AI-driven skill extraction using the Google Gemini API. The platform performs skill-gap analysis by comparing a user's extracted resume skills against a target job description, generates comprehensive interview reports with tailored questions, and produces ATS-optimized resumes — rendered to high-quality PDFs via Puppeteer — all stored in MongoDB for persistent history and management. The entire experience is delivered through a polished UI built with Tailwind CSS, Radix UI, shadcn/ui, Recharts, and Sonner toasts.

■ Next-js Auth-Sys

- **Stacks & Libraries:** React.js, Next.js, Axios, Nodemailer, Zod and React-hook-form, Sonner, Bcrypt.js, Jsonwebtoken

This project is NextAuth — a production-ready, full-featured authentication system built with Next.js 16 (App Router), React 19, and TypeScript, designed to be easily integrated into any modern web application. It covers the complete authentication lifecycle: user registration, login, logout, protected routes via middleware, and session management using JWT tokens combined with bcryptjs password hashing for security. Beyond basic auth, it implements comprehensive account management including email verification with one-hour expiry tokens, password reset flows with secure token validation, and profile management, all backed by a MongoDB database via Mongoose. The frontend uses React Hook Form with Zod schemas for type-safe real-time form validation, Tailwind CSS v4 for styling, Lucide React icons, and Sonner for toast notifications, while Nodemailer handles email delivery via Gmail SMTP — making the system both secure and user-friendly out of the box.

TRAINING & CERTIFICATIONS

May 2025 – Aug 2025

MERN Stack Development Training – Broadway Infosys

Sept 2025 - Oct 2025

Next JS Full Stack Development - Udemy
